

# Memorandum

Chu  
322

DATE : September 21, 1988  
TO : CIP Committee Attention John Hastig  
FROM : Lynn Davison *LD*  
SUBJECT : Funds for Underground Storage Tank work in 1988 and  
1989 P.E. 9076

The priority jobs in this CIP are replacement of five tanks at the South Service Center (SSC) and removal of four unused tanks at the Georgetown Steam Plant. This work was scheduled for this year because operational problems with a tank or oily soil at the site indicates these tanks may have leaked.

An engineering estimate prepared for this job is \$40,000 to \$50,000 higher than the amount in the CIP for 1988. I recommend the committee consider additional funds. Status information is not available at this time to indicate projects which may be under spent in 1988 or 1989; however, I would like the committee to investigate possible sources.

As you may recall last spring, Tom McArthur, John Hastig, and I came to an agreement about seeking additional 1988 dollars to complete the Georgetown and SSC work, if needed. We also agreed to seek dollars for 1989 to remove three unused tanks at Cedar Falls.

At present, there are sufficient hours budgeted for 1989, but no dollars. This job is next in priority because of the risk associated with leakage to the Cedar River which supplies unfiltered drinking water for the City. We estimate \$25,000 to \$30,000 will be needed for this job.

I suggest we address this topic at the next CIP meeting. Please call me if you have any questions. Thank you.
